COMMUNITY TOOLBOX

We're excited to announce the launch of Community Toolbox, where we give individuals and communities in the North East the opportunity to borrow smart sensing technologies for free – exploring how data on our surroundings, ourselves, and even pets can support our health, well-being, and daily lives.

By offering access to cutting-edge tools, we aim to help communities uncover valuable insights that improve understanding, break down barriers, and foster positive interactions that support us all in living healthier, longer, and more fulfilling lives.

Could your business contribute to the well-being of future generations while gaining exposure, insights, and access to new markets? By adding your smart products to the Toolbox, you can help foster innovation at a grassroots level, while generating valuable insights into the use of your product in a real-world environment.

Visit the Community Toolbox website to learn more, enquire about providing technology or start borrowing today!
